## **1 INTRODUCTION**

- 1.1 In February 1998, the Contracting Section of the Clwyd-Powys Archaeological Trust (hereafter CPAT Contracts) was asked by Mr B. Hardman, acting on behalf of Trinity Investments Ltd, to provide a quotation and specification for the carrying out of photographic recording work on the former Island Green Brewery at Pentrefelin, Wrexham (SJ 33205025).
- 1.2 The scheme of work required was detailed in a brief prepared by Wrexham Archaeology Service (part of Wrexham County Borough Council), acting in their capacity as the Archaeological Curator for the area. The brief specified an initial photographic survey of the site prior to commencement of demolition and construction work on the site, followed by photographic recording of any features of archaeological, historical, or architectural interest discovered during the course of the development.
- 1.3 Following acceptance of the CPAT quotation by Trinity Investments, the initial photographic survey was carried out at the end of May 1998. Occasional visits to record additional features of interest revealed by development work were made thereafter. Final written confirmation of the CPAT quotation was provided by Bowmer & Kirkland Ltd, the design and build contractors, on 11th September 1998.

## **2 HISTORICAL BACKGROUND**

- 2.1 The Grade II listed building known as the Island Green Brewery (PRN 32702) was established in 1856 by John Jones of Grove Lodge (Lerry 1960, 152).
- 2.2 Alterations to the site, including extensions and rebuilding of the existing structures, are believed to have been carried out in the later 19th and early 20th centuries, perhaps after the brewery had been taken over by Huntley & Mowat. In 1931 it was amalgamated into one concern with other local breweries to form The Border Breweries (Wrexham) Ltd (Lerry 1960, 152).
- 2.3 Following the amalgamation forming Border Breweries, the brewery subsequently became disused. Lerry briefly discussed the brewery in 1960, although he does not note whether it was in operation at the time. Some photographic recording of the site was undertaken by the Royal Commission on Ancient and Historical Monuments in Wales (RCAHMW) in 1988.

## **3 RESULTS OF PHOTOGRAPHIC SURVEY AND WATCHING BRIEF**

- 3.1 The initial photographic survey was undertaken prior to the commencement of demolition and construction work on the site. All buildings were photographed in colour slide and black and white print formats, although it should be noted that safety considerations resulting from the unsafe nature of the buildings initially precluded access from many areas. Where areas became accessible during construction they were photographed as part of the watching brief phase of the project. The photographs which form part of this report have been indexed by frame number (Appendix 1) and subject (Appendix 2); Colour slides commence at CS98/07/13 and black and white prints at 717.11, copies of this photography have been lodged in the Regional Sites and Monuments Record, CPAT, Welshpool and with the Curator at Wrexham Archaeology Service, in accordance with the project brief. The photographs mentioned below can be consulted at either of these repositories.
- 3.2 The buildings are all built of brick, although some stone mouldings and detail are present. They are described in order of their presumed use, below. Significant photographs of buildings or features are included in the relevant section in brackets.
- 3.3 The southern group of buildings comprised the maltings (CS98/08/23; BWP 718.21). At the time of the survey these consisted of two square plan malt kilns (CS98/07/13 & 27; BWP 717.11 & 26), with ornamental scalloped slate roofs, to the east-south-east of a three-storeyed range (CS98/07/15 & 25; BWP 717.13 & 24). Internally, the kilns had been completely rebuilt with the insertion of new concrete floor levels, presumably for storage; no early internal features were seen to survive.
- 3.4 The range to the west-north-west of the kilns had a brick exterior built on a dressed stone base. Internally (CS98/10/01; BWP 720.00) the beams carrying the first floor were supported by cast iron

columns manufactured by Cheetham & Chadwick, Eagle Foundry, Wrexham (CS98/10/03; BWP 720.2). Vaulted cellars were discovered beneath the ground floor of the range (CS98/08/28; BWP 718.27), and were seen to consist of a series of lateral compartments divided by brick partitions, running off a central passageway. The partitions supported a single layer of dressed stone which itself supported the arched brick vaulting; the dressed stone base supporting the exterior of the range continued beneath the ground surface to form the external wall of the cellars. The listing information comments that internal features on the ground and first floors of the range suggest it was used in the germination process; the unsafe nature of the structure, following a fire, meant that access could not be gained to the first floor of the range. An ornamental weathervane which was photographed by RCAHMW in 1988 (RCAHMW No 881703/4) had been subsequently dislodged from its position on the west-north-west gable of the range, perhaps during the fire previously mentioned, and was found in a damaged state (CS98/10/11; BWP 720.09). The roof trusses (CS98/12/19; BWP 721.16), which had surviving carpenter's marks (CS98/12/21; BWP 721.18), were removed from the range by Watkin Jones Construction staff during the course of the watching brief.

- 3.5 The range to the west-north-west of the kilns was linked to the main brewery buildings by a brick archway (CS98/07/18 & 22; BWP 717.18 & 22) which gave access to the rear courtyard. A blocked window or doorway (CS98/12/13; BWP 721.11) in the range west-north-west of the kilns, which formerly opened onto the archway, taken with a butt-joint between that range and the archway (CS98/12/15; BWP 721.13), may suggest that the archway is a later insertion.
- 3.6 On the north-north-east side of the archway there was a two-storeyed range in two parts. The east-south-east part (CS98/07/16; BWP 717.16) of the range was the original section, but a subsequent addition to the range (CS98/07/29, 31 & 33, CS98/10/28; BWP 717.28, 30 & 32, 720.26) had been constructed on its west-north-west side, presumably in the late 19th or early 20th centuries. Beneath the ground floor of the addition to the range was a cellar which contained bottle-washing machinery (CS98/10/29 & 32; BWP 720.28 & 30) and electricity distribution equipment (CS98/10/33; BWP 720.32). Elevators in the interior of the addition (CS98/09/24; BWP 719.25) would appear to have been used in the transport of crated bottles between different floors. The interior of the original part of the range was unsafe during the initial survey as can be seen in the accompanying photographs (CS98/09/21; BWP 719.22). However, once the structure had been made safe, the removal of later modifications revealed a stone flagged internal floor at ground level (CS98/14/15; BWP 730.17), with four arched openings in the east-south-east elevation of the range. The arches were seen to be supported by dressed stone springers resting on cast iron columns, each of which rested on a stone base (CS98/14/03; BWP 730.03). The first floor was unsafe and was not examined, but was seen to be based on horizontal beams supported by vertical cast iron beams of angular cross-section.
- 3.7 Adjoining the two-storeyed range on its north-north-east side was the main brewing tower (CS98/07/21, 35, CS98/08/02; BWP 717.19, 34, 718.1). Internally, the tower was formed on a girder framework supported by cast iron columns manufactured by John Melbourne, Engineers, Warrington. The ground floor room of the tower contained a fireplace (CS98/09/18; BWP 719.18), presumably used in the brewing process, which was ventilated by a stone-capped chimney on the north-north-east side of the tower (CS98/13/02; BWP 727.01).
- 3.8 On the north-north-east side of the main brewing tower there was a secondary range (CS98/08/02; BWP 718.01), also likely to have been used in the brewing process. A fireplace (CS98/12/33; BWP 721.31) remained on the west-north-west side of the range, and appeared to have served one of two internal brewing vats. Internal cast iron supporting columns were manufactured by John Melbourne, Engineers, Warrington.
- 3.9 On the west-north-west side of the brewing tower and secondary range there was an additional range of buildings (CS98/07/37; BWP 718.00). Included in these buildings were lean-to structures adjoining the brewing tower which had been used to house machinery (CS98/09/29 & 31; BWP 719.31 & 33). Little evidence regarding the use of the remaining buildings in this area was present, although following demolition of the structures a probable flue (CS98/13/23; BWP 727.21), constructed from firebricks, was revealed. It seems likely that the flue would have been used in the brewing process and may have been an original feature; it should survive, substantially intact, beneath a new building adjoining the brewing tower, which was in the process of construction during the watching brief.
- 3.10 The range located on the east-south-east side of the brewing tower (CS98/08/17 & 19; BWP 718.16 & 17) at the time of the initial survey was evidently of later construction than the main brewery buildings and appeared to be of late 19th or early 20th century date. The south-south-west part of the cellars (CS98/09/13; BWP 719.14) beneath the building had been used for storage while the north-

north-east part contained a well with an electric water pump (CS98/09/12; BWP 719.12); cast iron supports within the north-north-east part were manufactured by Powell Bros. & Whitaker, Wrexham. During the watching brief it became apparent that there had been an earlier building in this area; the walls of the cellars were found to be of dressed stone with a lining of brick (CS98/13/14; BWP 727.13) and a dressed stone springer (CS98/10/08; BWP 720.05) located at the southern corner of the brewing tower had been designed to serve a building on the east-south-east side of the tower in addition to the surviving arched range located on the south-south-west side of the tower. It seems likely that this earlier building was the one depicted on the 1st edition Ordnance Survey 1:2500 map (Denbighshire 28.12, surveyed 1872).

- 3.11 The western boundary of the brewery complex was defined by the former stable block (CS98/08/06 & CS98/10/22; BWP 718.05 & 720.20). Access to much of this building was not possible during the project owing to safety considerations, although an internal stone stairway (CS98/09/25; BWP 719.26) was recorded.
- 3.12 On the south-south-west side of the stable block there were a group of fairly recent structures, including a brick-built block (CS98/10/18 & 20; BWP 720.15 & 18), part of which had been used as toilets. The dressed stone wall (CS98/08/10; BWP 718.09) adjoining the toilet block may have represented a surviving section of the original brewery boundary wall.
- 3.13 Two interesting artefacts were recovered by the on-site staff during the watching brief, which may shed further light on earlier phases of the brewery. A large stone slab with a central hole (CS98/13/24; BWP 727.24) was reported to have acted as the capstone for a well located to the west of the brewing tower, though the well itself was not visible during the site visits undertaken as part of the watching brief and it is therefore impossible to ascertain its relationship with the brewery complex. In addition to the above artefact, a cast iron drain or sump (CS98/13/18; BWP 727.17) was found in the vicinity of the brewing tower. No makers name was present, but it seems possible that the artefact belonged to an early phase of the brewery.

#### **4 CONCLUSIONS**

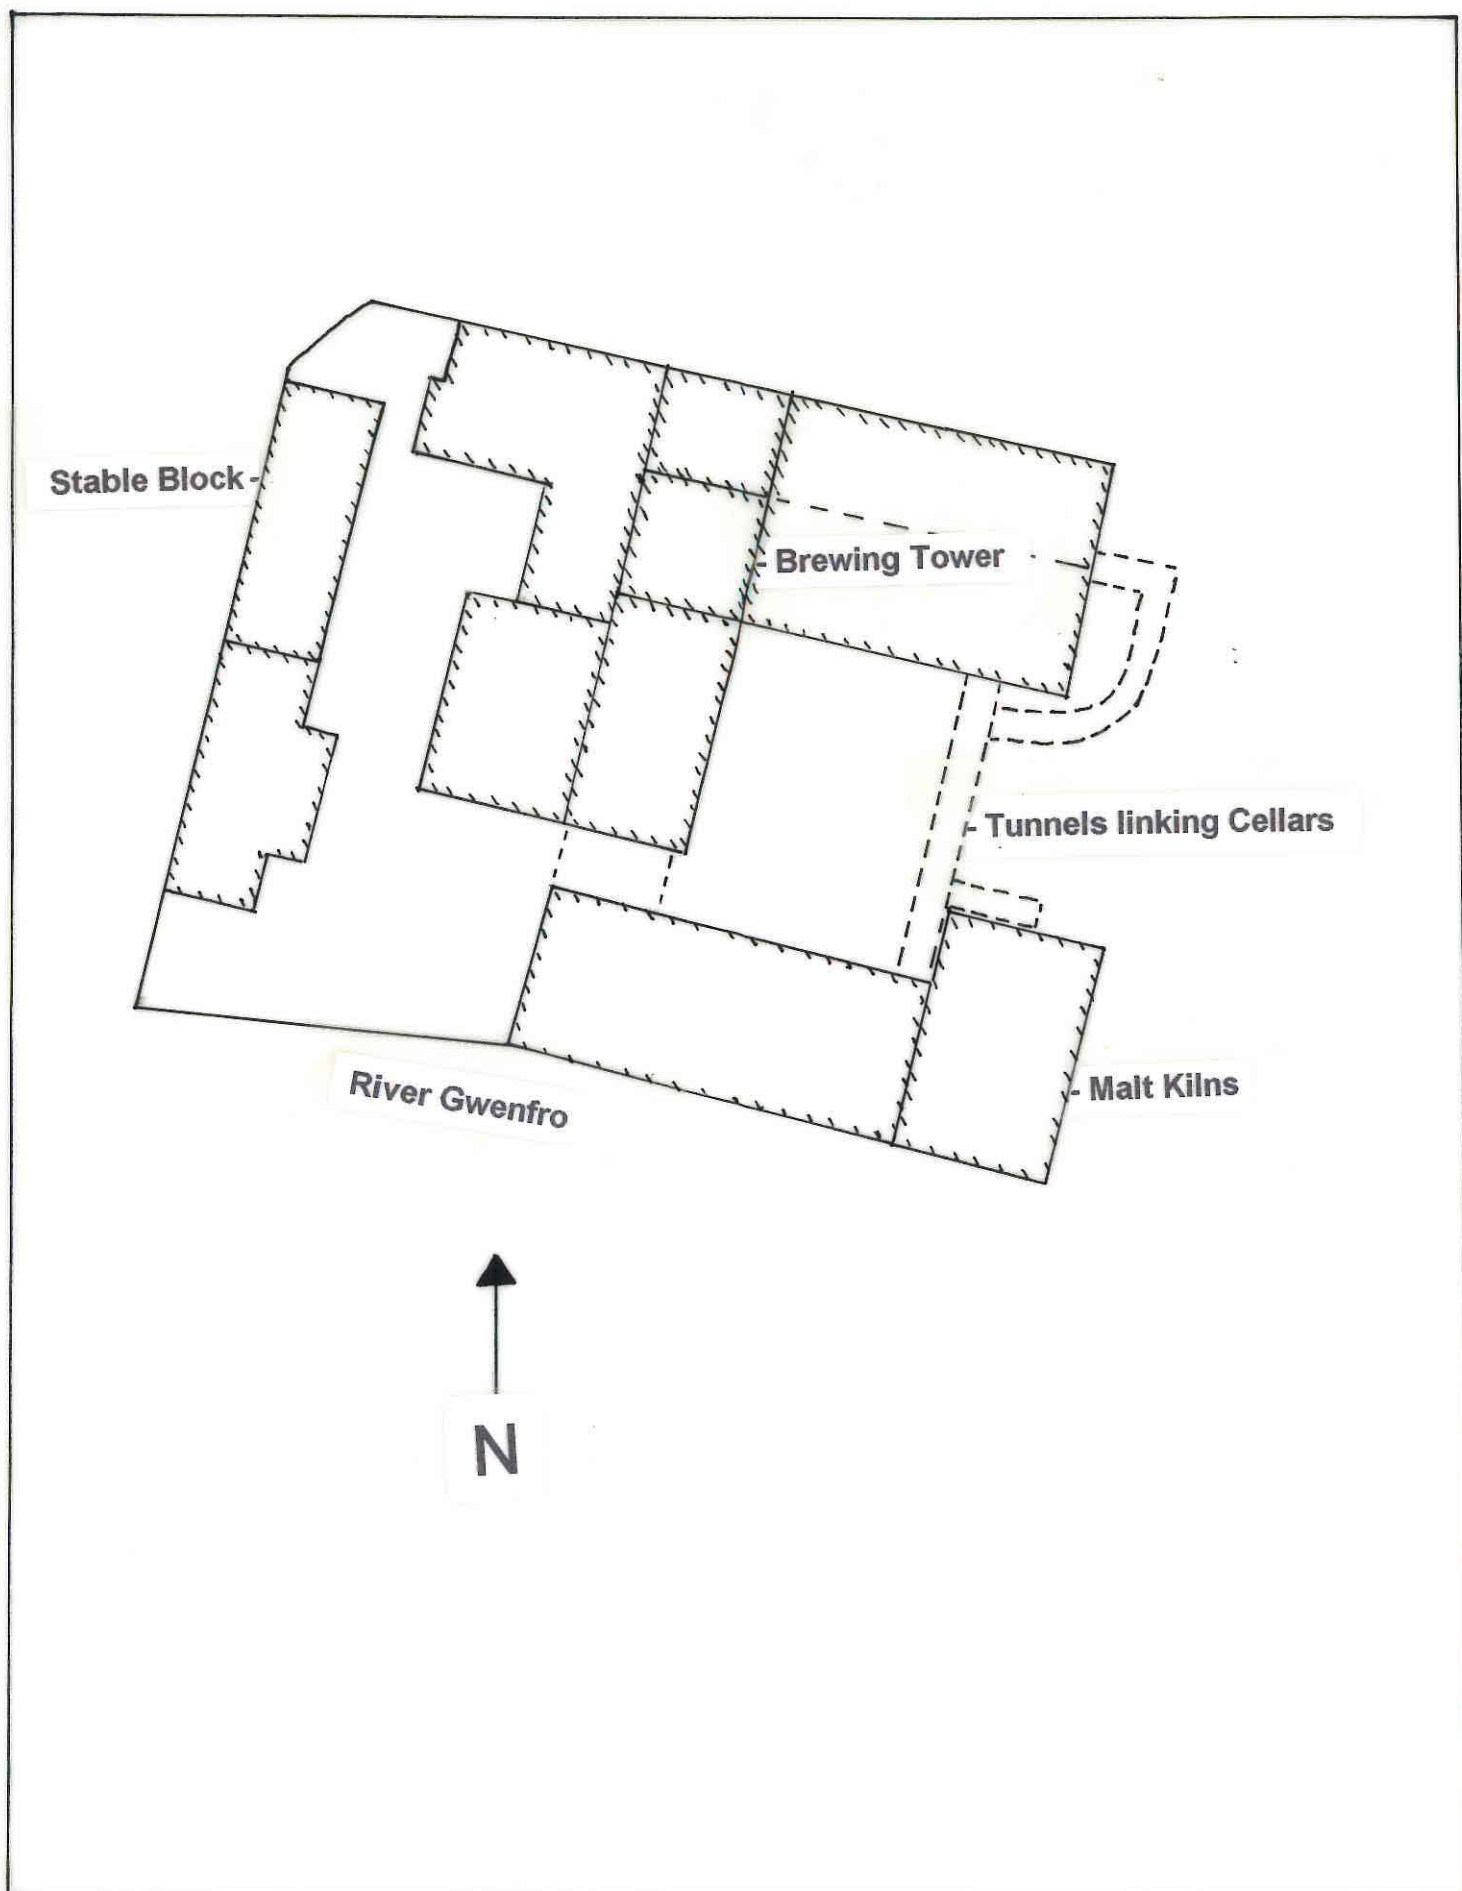

- 4.1 The buildings present at the time of the initial survey represented a brewery complex which had been substantially modified since its construction in 1856, although many of the original features of the site had been retained. The original buildings, which are intended to be repaired as part of the development, are thought to comprise the brewing tower and the range to its south-south-west, two malt kilns and the range to their west-north-west which may have been used in the germination process, and the former stables.
- 4.2 The remainder of the buildings present prior to the commencement of the development comprised ranges which are thought to have been added to the original structures in the late 19th or early 20th centuries. However, it should be noted that there was strong evidence for an original range, which had been subsequently rebuilt, retaining its original cellars, on the east-south-east side of the brewing tower.
- 4.3 Cellars present beneath two ranges of buildings were found to be linked by a system of underground tunnels. It seems probable that these were original features of the brewery complex.
- 4.4 At some point in the history of the brewery it seems apparent that there was a need for increased brewing capacity, resulting in the addition of the secondary range onto the north-north-eastern side of the brewing tower. Substantial modifications to the structure of the brewing tower, including the blocking up of windows, may have been contemporary with the construction of the secondary range, although similar modifications to the secondary range suggested that this occurred in a later period of the brewery.
- 4.5 Detailed desk-top study has not formed a part of this project, and it is possible that examination of primary and secondary sources may reveal further information on the history and development of the brewery.

## **5 ACKNOWLEDGEMENTS**

- 5.1 The writer would like to thank the on-site staff of Watkin Jones Construction, in particular Mr F. Cook, for their assistance with access to the site during the construction work.
- 5.2 The writer would also like to thank the staff of the Royal Commission on Ancient and Historical Monuments in Wales, Aberystwyth, for providing information on a previous photographic survey of the site carried out by them in 1988.

### ISLAND GREEN BREWERY, WREXHAM: SPECIFICATION FOR AN ARCHAEOLOGICAL PHOTOGRAPHIC SURVEY AND WATCHING BRIEF BY CLWYD-POWYS ARCHAEOLOGICAL TRUST

#### 1 Introduction

- 1.1 The proposed development at the Island Green Brewery site, Wrexham involves the conversion of the buildings which made up the brewery to residential use.
- 1.2 The brewery was established in 1856 and today comprises a relatively intact group of buildings including two oasthouses.
- 1.3 The Curatorial Section of the Clwyd-Powys Archaeological Trust, as archaeological advisors to the local planning authority has advised that a photographic survey of the monument should be undertaken to record the monument prior to and during its refurbishment. Accordingly a brief (dated Feb 27th 1998) has been prepared by Wrexham Archaeology Service which describes the scheme of archaeological works required.

#### 2 Objectives

- 2.1 The objectives of the survey is to record the remaining buildings photographically to preserve the structure by record;
- 2.2 to maintain a watching brief during the development;
- 2.3 to prepare a report outlining the results of the survey.

#### 3 Methods

- 3.1 The survey will involve the taking of photographs in colour slide and black and white print film. General shots as well as closeups of elevations and architectural detail will be taken.
- 3.2 A watching Brief will be maintained during the development and any archaeological or architectural features which come to light will also be recorded photographically.
- 3.2 Following the on-site work an illustrated and bound report will be prepared according to the principles laid out in the Curatorial Brief (page 4). This will be in A4 format and contain an indexed loose-leafed album of black and white prints as well as an index of all photographs taken.
- 3.5 The site archive will be prepared to specifications laid out in Appendix 3 in the Management of Archaeological Projects (English Heritage, 1991).

#### 4 Resources and Programming

- 4.1 The survey will be undertaken by a small team of 1 skilled archaeologist under the direct supervision of an experienced field archaeologist. Overall supervision will be by Dr A Gibson, a senior member of CPAT's staff who is also a member of the Institute of Field Archaeologists.

- 4.2 All report preparation will be completed by the same field archaeologists who conducted the survey.
- 4.3 It is anticipated that the field element of the survey will take no more than 3 days in all and that the subsequent report would be prepared immediately after the completion of the watching brief, dependent on the client's instructions and the arrangement of a suitable timetable. The date of commencement, at the time of writing, has yet to be agreed with the client, and will be dependent on the state of the site and negotiated access. The archaeological curator will be informed of the detailed timetable and staffing levels when agreement has been reached with the client.
- 4.4 Requirements relating to Health and Safety regulations will be adhered to by CPAT and its staff.
- 4.5 CPAT is covered by appropriate Public and Employer's Liability insurance.

A.M. Gibson  
Projects manager
